			ART UNIT 2611	PAPER NUMBER
			NOTIFICATION DATE 03/19/2009	DELIVERY MODE ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

ip.department.us@nxp.com

Office Action Summary

Application No.

10/540,682

Applicant(s)

DAI ET AL.

Examiner

DAVID HUANG

Art Unit

2611

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 24 June 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-5, 7-11 and 18-22 is/are rejected.
- 7) ☒ Claim(s) 6 and 12-17 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 24 June 2005 is/are: a) ☐ accepted or b) ☒ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/003)
Paper No(s)/Mail Date _____

- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

3. Claims 1-9, and 14-17 objected to because of the following informalities:
Claim 1, line 7, "radio frequency signal processing module" should be plural (modules).
Claim 3, line 6, "module" should be plural (modules).
Claim 3, line 16, "modules" should be singular (only one smart antenna processing module).
Claim 6, line 4, "Midamble" should be "a Midamble".
Claim 7, line 5, "Midamble" should be "a Midamble".
Claim 14, line 4, "Midamble" should be "a Midamble".
Claim 15, line 4, "Midamble" should be "a Midamble".

Claim 17, line 2, "Midamble" should be "the Midamble" or "said Midamble".

Claims 2, 4, 5, 8, 9, and 16 are dependent on at least one of the above objected claims, and are likewise objected.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. **Claims 2-5, 7, 8, and 19-22** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites "said baseband processing module provides said control information to said smart antenna processing module according to data outputted from one of the plurality of groups of radio frequency signal processing modules" (lines 1-5). However, in claim 1, lines 11-13 state that the baseband processing module provides the control information according to "data from said smart antenna processing module". It is unclear from the claim language whether the control information is providing according to the data from the smart antenna module or the data from one of the RF signal processing modules (or a combination of the two). It is also unclear whether these two data are the same or not. For examination on the merits, the claim will be interpreted as best understood.

Claim 3 recites the limitation "data stream" in line 15. It is unclear whether this is a new limitation or if it refers to some previously recited limitation for some input into the smart antenna processing module. For examination on the merits, the limitation will be read as "data streams" generally referring to any inputs into the smart antenna processing module.

Claims 4, 5, and 7 are dependent on claim 3, and are likewise rejected.

Claim 8 recites the limitation "the Midambles of both the input multi-channel signals and the control information" in lines 11-12. There is insufficient antecedent basis for this limitation in the claim. While, the antecedent basis of the control information Midamble is sufficient, it is lacking for the Midamble of the input multi-channel signals. For examination on the merits, the claim will be interpreted as best understood.

Claim 19 recites the limitation "said plurality groups of signals" in line 12. There is insufficient antecedent basis for this limitation in the claim. For examination on the merits, the claim will be interpreted in light of claim 3. Claim 19 also recites the limitation "providing said weight to each of the plurality of weight adjusting modules" in lines 13-14. It is unclear which weight is being provided to each module, since the wording suggests that the same weight is provided to all the modules. For examination on the merits, the limitation in question will be understood as providing each module with its respective weight.

Claims 20 and 21 are dependent on claim 19, and are likewise rejected.

In **claim 22**, "transmitting means for transmitting signals to the base-station via uplink" and "receiving means for receiving radio frequency signals..." are means plus function limitations that invokes 112, 6th paragraph. However, the written description fails to clearly link or associated the disclosed structure, material, or acts to the claimed function such that one of

ordinary skill in the art would recognize what structure, material, or acts perform the claimed function. While there are broad discussions of uplink packets and synchronization, there is no transmitter or transmitter means mentioned in specification.

Applicant is required to:

- a) Amend the claim so that the claim limitation will no longer be a means (or step) plus function limitation under 35 U.S.C. 112, sixth paragraph; or
- b) Amend the written description of the specification such that it clearly links or associates the corresponding structure, material, or acts to the claimed function without introducing any new matter (35 U.S.C. 132(a)); or
- c) State on the record where the corresponding structure, material, or acts are set forth in the written description of the specification that perform the claimed function. For more information, see 37 CFR 1.75(d) and MPEP 2181 and 608.01(o).

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

7. Claims 1 and 9 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 and 17 of copending Application No.

10/540,791 (line # refer to preliminary amendment) in view of Applicant's admitted prior art (specification, page 2, line 6 - page 3, Figs. 1-2; hereinafter "APA").

Regarding claim 1, claim 1 of application no. 10/540,791 discloses a mobile terminal with smart antennas, comprising:

a plurality of groups of radio frequency signal processing modules, for transforming received multi-channel radio frequency signals to multi-channel baseband signals (lines 1-5);

a smart antenna processing module, for smart antenna baseband processing said multi-channel baseband signals outputted from said plurality of groups of radio frequency signal processing module so as to combine said multi-channel baseband signals into single-channel baseband signals, according to control information received one-off as said smart antenna processing module is enabled (lines 6-10); and

a baseband processing module, for providing said control information to said smart antenna processing module, and baseband processing said single-channel baseband signals outputted from said smart antenna processing module (lines 12-15).

Claim 1 of application no. 10/540,791 fails to expressly disclose providing said control information to said smart antenna processing module *according to data from said smart antenna processing module*.

APA (specification, page 2, line 6 - page 3, Figs. 1-2), discloses a similar system in which the output of the SA module 206 feeds into baseband processing blocks 209 and 210, which output control signals back to the SA module (feedback, page 2, lines 19-25, Fig. 2).

Therefore, it would have been obvious to one of ordinary skill in the art to specify providing control information according to data from the smart antenna module, since it is suggested by a similar prior art implementation.

Regarding claim 9, claim 17, dependent on claim 1, of application no. 10/540,791 discloses the mobile terminal is applied to cellular communication mobile terminals or other wireless communication terminals, wireless LAN terminals employing one of following standards: TD-SCDMA, GSM, GPRS, EDGE, WCDMA, CDMA IS95, CDMA2000.

This is a provisional obviousness-type double patenting rejection.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. **Claims 1, 2, 9-11, and 18** are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art (specification, page 2, line 6 - page 3; hereinafter "APA") in view of Li (US 7,130,365) and Petrus (US 6,177,906).

Regarding **claims 1 and 10**, APA discloses a mobile terminal with smart antennas, comprising:

a plurality of groups of radio frequency signal processing modules, for transforming received radio frequency signals to baseband signals (RF and ADC blocks, Fig. 2, see also RF module 101 and ADC 102 in Fig. 1, page 2, lines 18-22);

a smart antenna processing module, for smart antenna baseband processing said baseband signals outputted from said plurality of groups of radio frequency signal processing module so as to combine said baseband signals, according to control information received one-off (SA module 206, Fig. 2); and

a baseband processing module, for providing said control information to said smart antenna processing module according to data from said smart antenna processing module, and baseband processing said combined baseband signals outputted from said smart antenna processing module (Rake receiver/despreading module 209, Viterbi 210, and baseband control module, Fig. 2; page 3, lines 19-25).

APA fails to expressly disclose (i) that the received radio frequency signals and subsequent baseband signals are multi-channel signals, (ii) the smart antenna processing module combines the multi-channel baseband signals into single-channel baseband signals, and (iii) that the control information is received one-off as said smart antenna processing module is enabled.

With respect to (i)-(ii), it is well known in the art that CDMA signals are composed of multiple code channels and that smart antenna technology processes each code channel separately, as evidenced by Li (column 2, lines 7-9 and 11-12).

Therefore, it would have been obvious to one of ordinary skill at the time the invention was made to specify multi-channel received RF and baseband signals in the system disclosed in APA, and that the smart antenna of APA combines the multi-channel baseband signals to generate a single channel baseband signal, since these are all well known in the art for CDMA and smart antenna technology.

With respect to (iii), Petrus discloses decision-directed smart antenna combining system (Fig. 6, signal copy, 607, weight calculate and demod 615, essentially a baseband processing block), in which the weight vector is initialized as $[1 \ 0 \ 0 \ \dots \ 0]^T$, such that the initial operation is to calculate an actual weight vector according to equations 8 and 9 (col. 12, lines 1-40). Thus, the initialized weight vector only passes a single antenna signal, and the actual combining of multiple antenna signals, is not enabled until the next converged weight vector.

Because both APA and Petrus disclose means and methods of smart antenna combining according to control information from baseband processing, it would have been obvious to one of ordinary skill in the art to substitute one for the other for the predictable result of enabling smart antenna combining according to control information.

Regarding **claims 2 and 11**, the combination of APA, Li, and Petrus discloses everything applied to claim 1, and Petrus further discloses said baseband processing module provides said control information to said smart antenna processing module according to data outputted from one of the plurality of groups of radio frequency signal processing modules before said smart antenna processing module is enabled (weight calculation block 615, feeds back weights to signal copy block 607, according to initialized weight vector $[1 \ 0 \ 0 \ \dots \ 0]^T$, col. 12, lines 8-10; the initiated weight vector passes only signals from a single receiving block 122, as in Fig. 6).

Regarding **claim 9 and 18**, APA further discloses wherein the mobile terminal is applied to cellular communication mobile terminals or other wireless communication terminals, wireless LAN terminals employing one of following standards: TD-SCDMA, GSM, GPRS, EDGE, WCDMA, CDMA IS95, CDMA2000 (mobile terminal based on TD-SCDMA standard, page 2, line 6).

10. **Claim 22** is rejected under 35 U.S.C. 103(a) as being unpatentable over APA (specification, page 2, line 6 - page 3) in view of Li (US 7,130,365).

Regarding **claim 22**, APA discloses a mobile terminal, comprising: receiving means, for receiving radio frequency signals from the base-station via down-link, wherein the receiving means can transform signals received by smart antennas in the receiving means to single-channel signals to carry out a baseband processing according to control information received one-off by the receiving means.

APA fails to expressly disclose (i) transmitting means, for transmitting signals to a base-station via uplink, and (ii) receiving and transforming multi-channel signals.

With respect to (i), the RF and ADC/DAC blocks of Fig. 2, clearly depict two-way arrows between the rest of the mobile device and the transmitting/receiving elements. Thus, it is inherent that the device of Fig. 2 also comprises transmitting means. Furthermore, it is also inherent that mobile phone devices, such as the one in Fig. 2 of APA, transmit signals to a base-station via uplink.

Therefore, it would have been obvious to one of ordinary skill in the art to specify that the prior art device of Fig. 2 comprises the transmitter means as claimed, since it is inherent from the figure.

With respect to (ii), it is well known in the art that CDMA signals are composed of multiple code channels and that smart antenna technology processes each code channel separately, as evidenced by Li (column 2, lines 7-9 and 11-12).

Therefore, it would have been obvious to one of ordinary skill at the time the invention was made to specify multi-channel received RF and baseband signals in the system disclosed in APA, and that the smart antenna of APA combines the multi-channel baseband signals to generate a single channel baseband signal, since these are all well known in the art for CDMA and smart antenna technology.

Allowable Subject Matter

11. Claim 19 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.
12. Claims 3-5,7 and 8 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
13. Claims 6, 12-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Braun (US 2003/0043892).

Kyeong et al. (US 2002/0054621).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to DAVID HUANG whose telephone number is (571)270-1798. The examiner can normally be reached on Monday - Friday, 8:00 a.m. - 5:00 p.m., EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shuwang Liu can be reached on (571) 272-3036. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
